MADE IN GERMANY

SEBO BS 36 / 46 COMFORT

GOOD FOR BUSINESS

The BS 36 / 46 Comfort is the latest evolution of SEBO's best selling professional upright vacuum cleaner. A new power head gives improved performance and reliability, as well as making the machine easier to push and reducing servicing time.

High quality ball bearings are used at both ends of the brush roller and the motor pulley is made of metal for extended pulley and belt life. For simple servicing, internal components are positioned so that they can be removed without having to take out any others; for example, the belt can be removed without removing the brush roller.

01 Works when flat

BS machines will work when completely flat, making it easy to clean under furniture.

02 Brush off when upright

When the machine is put into the upright position, the brush motor will automatically turn off and will re-start when the foot pedal is depressed and the handle lowered.

03 Innovative electronics

An electronic controller featuring the latest SMD technology uses easy to see LED lights to advise the optimum brush height and will turn off the brush motor if the brush becomes jammed.

04 Easy brush strip change

The brush strip can be changed without the use of tools, simply by pressing a button, releasing the side plate and then sliding out the brush strip.

05 Easy bag change

The bags and filters are easily accessible. With their multi-layer design and sealable tops, SEBO bags are hygienic and offer optimum performance.

06 Practical design

With four wheels, the new power head makes the Comfort models easy to push. It has a built-in trap door for rapid blockage removal and the rear base plate can be unscrewed for easy replacement.

YOUR SEBO DISTRIBUTOR:

SEBO BS 36 COMFORT

Suction motor: 1300W max.

Brush motor: 175W

Airflow: 52 l/sec

Filterbag: 5.0l, 3-layer
